to exit the auto menu

## Back to On/Off

Press BUTTON 1 second

# CHARGING

## Solar

When the Rydon is placed in sunlight the solar panel will charge the battery. When charging the STATUS LED will turn RED. When the battery is fully charged the STATUS LED will turn GREEN

## USB

Remove the rubber cover from the USB port. Connect the micro usb cable to the USB. You can use any device with a usb port to charge, for example phone charger, laptop, powerbank etc.

When charging the STATUS LED will turn RED. When the battery is fully charged the STATUS LED will turn GREEN. Place back the rubber cover to the USB, important!

## Low battery detection

When the STATUS LED turns BLUE when the Rydon is on, it means it almost it is almost out of energy. There is still about 3-5 hours light remaining so you can finish your ride. Use either the solar panel or the USB port to charge the battery.
